FDA Guidance and Data Standards Catalog

FDA Guidance and Data Standards Catalog

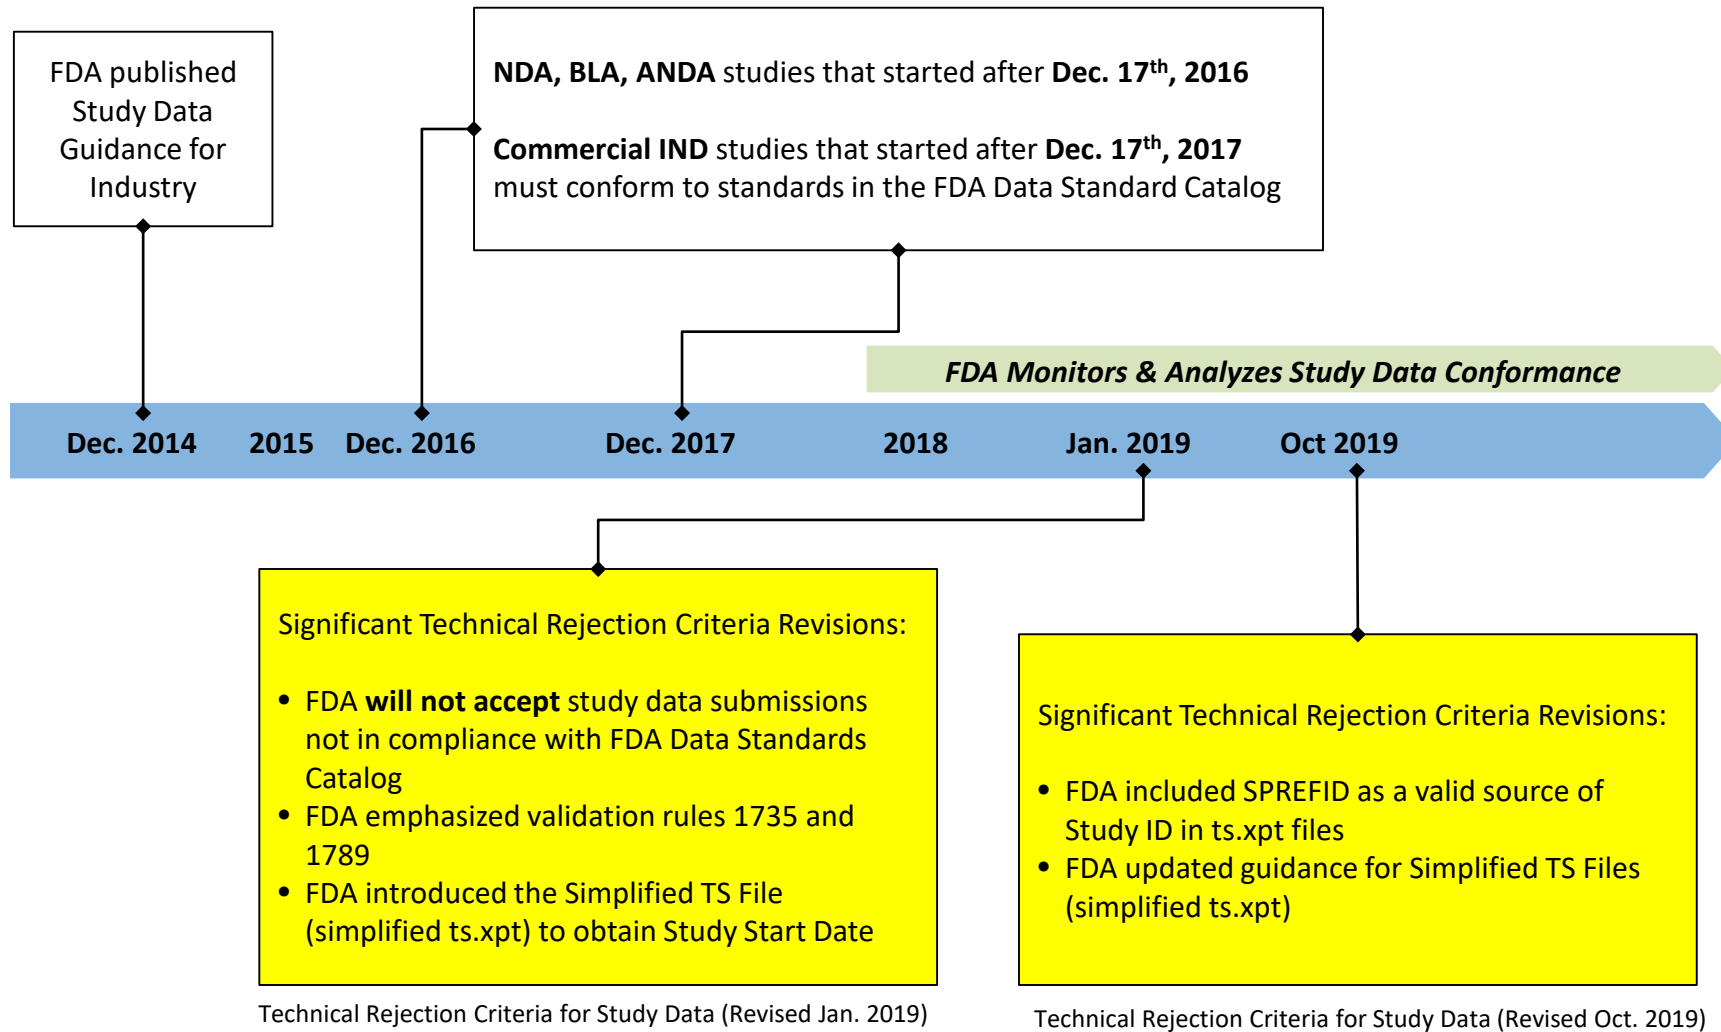

- ❖ Per FD&C Act Section 745A(a), drug application sponsors must use the standards defined in the FDA Data Standards Catalog starting 24 months after final guidance for a specific submission type.
- ❖ FDA issued “Providing Regulatory Submissions in Electronic Format - Standardized Study Data: Guidance for Industry” in December 2014.
- ❖ Sponsors must conform to standards in the FDA Data Standards Catalog:
 - NDA, BLA, ANDA studies that started after December 17th, 2016
 - Commercial IND studies started after December 17th, 2017

Revised Technical Rejection Criteria for Study Data

Study Data Technical Rejection Criteria (SDTRC) Revisions

Study Data Technical Rejection Criteria (SDTRC) Revisions (Jan. 2019)

Refuse to file → Will not accept	
The FDA may refuse to file (RTF) for NDAs and BLAs, or refuse to receive (RTR) for ANDAs, an electronic submission that does not have study data in conformance to the required standards specified in the FDA Data Standards Catalog	FDA will not accept an electronic submission that does not have study data in compliance with the required standards specified in the FDA Data Standards Catalog

Revised TRC rules and elevated 1735 and 1789 to high severity errors		
Error	Description	Severity
1734	Trial Summary (TS) dataset (ts.xpt) with information on study start date must be present for required sections*	High
1735	Correct STF file-tags must be used for all standardized datasets and corresponding define.xml files in required sections*	High
1736	For SEND data, a DM dataset and define xml must be submitted in required sections* For SDTM data, a DM dataset and define.xml must be submitted in required sections* For ADaM data, an ADSL dataset and define.xml must be submitted in required sections*	High
1789**	Study files must be referenced in a Study Tagging File (STF)	High

Study Data Technical Rejection Criteria (SDTRC) Revisions (Oct. 2019)

Introduced the Simplified TS File (simplified ts.xpt) and TSVALNF

For a study without a valid SSD:

STUDYID	TSPARMCD	TSVAL	TSVALNF
study ID in STF	SSTDTC		Use the value 'NA'

Included SPREFID for Study ID matching

If a file is referenced within a study section in Module 4 or 5, a STF and ts.xpt must be present to identify the study ID and SSD to which the file belongs. The ts.xpt and STF need to contain matching study ID values.

If a file is referenced within a study section in Module 4 or 5, a STF and ts.xpt must be present to identify the study ID and SSD to which the file belongs. The ts.xpt needs to contain either a study ID (STUDYID) or Sponsor Reference ID (SPREFID) value that matches with the STF study ID.

Study Data Technical Rejection Criteria (SDTRC) Revisions (Oct. 2019)

Example in Revised TRC -SPREFID for Study ID matching

A study in standardized format is submitted to FDA and the study files are referenced in a STF, a ts.xpt dataset is included in the study. **The SPREFID in the ts.xpt dataset matches the study ID (study-id) in the STF.** The Study Start Date in the ts.xpt is in SDTM or SEND format and the study begins after December 17, 2016, for NDAs, BLAs, and ANDAs (or December 17, 2017, for Commercial INDs).

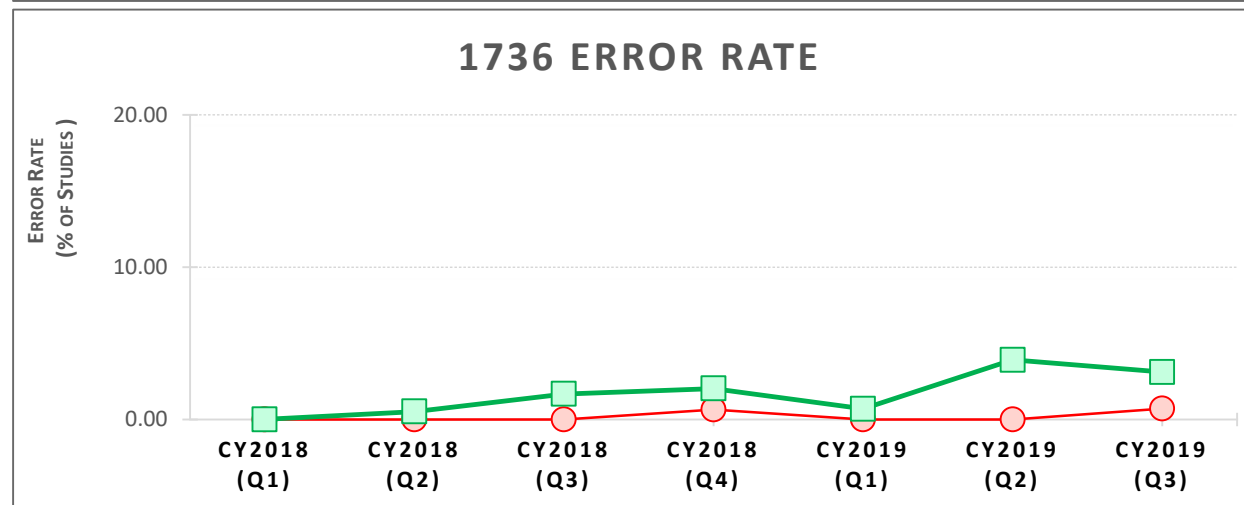

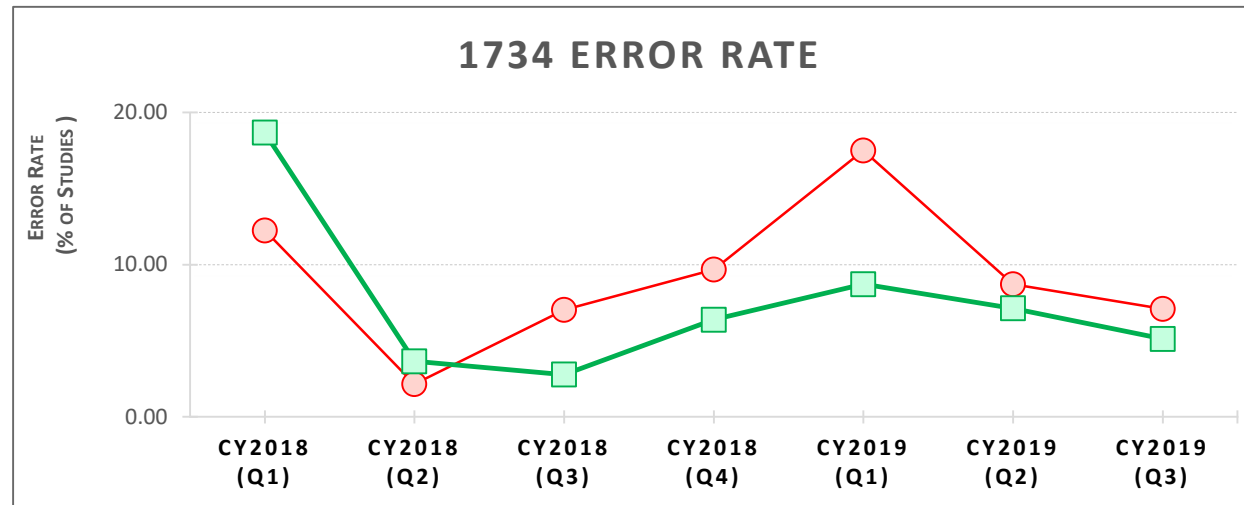

- ❖ Additional parameter in the ts.xpt for matching study id with STF study id to pass validation 1734
 - The SPREFID parameter allows for an alternate way for Sponsors provide a matching study id
 - Multiple SPREFID values are allowed in the ts.xpt

Study Data Technical Rejection Criteria Conformance Trend

1734 and 1736 Error Rate Comparison - Commercial IND's and NDA's in Module 4

- ❖ IND Submissions with study data shows improvement in the 1734 Validation Error Rate but have a slight increase in Error Rate for Validation Errors 1736

—○— NDA (m4)
—□— IND (m4)

Notes:

- 1) Analysis is conducted according to the revised TRC (Revised Jan. 2019)

CDER Conformance: Study Level Validation Errors 1734, 1735 & 1736

- ❖ Commercial IND's and NDA's were assessed for conformance to three high-level error, 1734, 1735, & 1736, as defined in the SDTRC (Revised Jan. 2019)

Notes:

- 1) One drug application could contain multiple submissions throughout its review life-cycle, such as original, supplements, and amendments
- 2) Analysis includes NDA and Commercial IND submissions received by CDER between 1/1/2018 to 9/30/2019
- 3) Submission with multiple studies can report both Errors 1734, 1735 and 1736
- 4) Validation of errors 1735 and 1736 are not performed if a study has Error 1734
- 5) Analysis is conducted according to the revised TRC (Revised Jan. 2019)

CDER Conformance: SPREFID Analysis (CY2019 Q1-Q3)

❖ With SPREFID as a possible match to the STF study-id, the **pass rate increases by 17.76%** (Revised Oct. 2019)

Simplified TS File Creation Guide

The image shows two pages from the 'Simplified TS File Creation Guide'. The left page contains instructions for Step 3 and Step 4. Step 3 involves editing a code block in a text editor, with a screenshot showing a code editor window with yellow arrows pointing to specific lines of code. Step 4 involves running the code by selecting 'Run All' from the Edit menu. The right page contains instructions for Option 2: Use Python. It includes a pre-requisite to install Python and IDLE, a screenshot of the Python installer, and instructions to launch a command prompt and type 'cmd'. It also lists three steps for using the command line interface to create the ts.xpt file.

PhUSE Utility to Generate Simplified TS Files

- ❖ **Purpose** –PhUSE has developed a free web utility to generate a simplified TS
- This utility provides is an simple user interface to generate and view the simplified ts.xpt file
- Users can download the ts.xpt file after filling the necessary information on the web page like – Study ID, TSPARMCD,TSVAL and TSVALNF
- ❖ This link to this Guide will be available on the PhUSE Web Page –

The screenshot shows a web interface titled "Creating TS Domain". On the left is a dark sidebar with the text "Simplified TS". The main content area has a light blue header with a "Show/Hide sidebar" button. Below the header are two buttons: "Create" and "View". The form contains the following fields:

- Study ID (STUDYID) ***: An empty text input field.
- Study Type Parameter (TSPARMCD) ***: A dropdown menu with "Nonclinical (STSTDTC)" selected.
- Study Start Date (TSVAL)**: A text input field containing "2019-10-30".
- Exception Code (TSVALNF)**: An empty text input field.

Study Data for Submission to CDER and CBER

Sign up for email updates.

Data standards enable FDA to modernize and streamline the review process. They also enable more consistent use of analysis tools to better view drug data and highlight areas of concern.

Study data standards describe a standard way to exchange clinical and nonclinical research data between computer systems. These standards provide a consistent general framework for organizing study data, including templates for datasets, standard names for variables, and standard ways of doing calculations with common variables.

FDA is instituting new requirements for data standards that will apply to most study data submitted to FDA's Center for Drug Evaluation and Research (CDER) and Center for Biologics Evaluation and Research (CBER).

Beginning after the dates specified below, FDA may refuse to file for New Drug Applications (NDAs) and Biologics License Applications (BLAs) or refuse to receive for Abbreviated NDAs (ANDAs) any electronic submission whose study data do not conform to the required standards specified in the FDA Data Standards Catalog. See the **Technical Rejection Criteria for Study Data (PDF)** for more information. FDA conducted an analysis of study data conformance on submissions received during a specified time period and developed a presentation on the overall conformance results. **Study Data Conformance (PDF)** To assist sponsors when submitting study data, FDA has created the **Technical Rejection Criteria Self-Check Worksheet (PDF)** and **Worksheet Instructions (PDF)**.
