Calories: What's in a Number?

Nutrition Facts Label

Nutrition Facts 8 servings per container Serving size 2/3 cup (55g) **Amount per serving** Calories % Daily Value* **Total Fat 8g** 10% 5% Saturated Fat 1g Trans Fat 0g Cholesterol 0mg 0% 7% Sodium 160mg **Total Carbohydrate** 37g 13% Dietary Fiber 4g 14% Total Sugars 12g Includes 10g Added Sugars 20% **Protein** 3g Vitamin D 2mcg 10% Calcium 260mg 20% Iron 8mg 45% Potassium 240mg 6% * The % Daily Value (DV) tells you how much a nutrient in a serving of food contributes to a daily diet. 2,000 calories a day is used for general nutrition advice.

What Are Calories?

Calories refers to the total number of calories, or "energy" you get from all sources (carbohydrate, fat, protein, and alcohol) in a serving of a food or beverage.

Calories Go Big

Calories are displayed in large and bold font on the Nutrition Facts label to make the information easier to find and use.

Make Calories Work For You

To achieve or maintain a healthy body weight, balance the number of calories you eat and drink with the number of calories your body uses. 2,000 calories a day is used as a general guide for nutrition advice, but your calorie needs may be higher or lower depending on your age, sex, height, weight, and physical activity level. Eating too many calories per day is linked to overweight and obesity. Find out how many calories you need at

https://www.myplate.gov/myplate-plan.

Nutrition Facts Label What's in it for you?

Size Matters

Serving sizes on the Nutrition Facts label reflect the amount people typically eat and drink. It is not a recommendation of how much to eat. The nutrition information listed on the Nutrition Facts label is usually based on one serving of the food; however, some containers may also have information displayed per package.

You may want to pay attention to the serving size, especially how many servings there are in the container, so you know the amount of calories and nutrients you are consuming. One package of food may contain more than one serving, so, if you eat two servings you would be getting two times the calories shown on the label.

For example, if you ate one serving of the food shown on the label on the right, you would be eating **220** calories. And two servings would be **440** calories.

| 2 servings per container Serving size 1 cup (255g | | | | |
|---|-------------|-------|-------------|-----|
| Calories | Per serving | | Per contain | |
| | | % DV* | | % D |
| Total Fat | 5g | 6% | 10g | 13 |
