Subject: RE: Duration of antigen detection

The team has been contacted. We'll go through the data we have to see what we can do for Phase I and (b) (5).
We'd been asked to update our current FAQ on screening asymptomatics with the version immediately below and were going to post it by Monday morning. I can hold it for now until we resolve your Phase I request.

We'll work on Phase II, as well.

Q. Does the FDA have recommendations for healthcare providers using SARS-CoV-2 diagnostic tests for screening asymptomatic individuals for COVID-19?

A: An asymptomatic individual may be suspected of COVID-19 by their healthcare provider for various reasons, such as known exposure or working in a high-risk environment. Such use is within the authorized indications for use of tests intended for individuals suspected of COVID-19 by their healthcare provider. For healthcare providers who are ordering an authorized SARS-CoV-2 diagnostic test to be used off-label (outside the authorization) to screen asymptomatic individuals not suspected of having COVID-19, we recommend they consider the information below.

Although the current available literature suggests that symptomatic individuals with COVID-19 and asymptomatic individuals without known exposure may have similar levels of viral genetic material, there is limited data on the distribution of viral loads in individuals with and without symptoms across demographics, different settings, and specimen types. Therefore, when screening asymptomatic individuals, healthcare providers should consider using a highly sensitive test, especially if rapid turnaround times are available. If highly sensitive tests are not feasible, or if turnaround times are prolonged, health care providers may consider use of less sensitive point of care tests, even if they are not specifically authorized for this indication. For congregate care settings, like nursing homes or similar settings, repeated use of rapid point of care testing may be superior for overall infection control compared to less frequent, highly sensitive tests with prolonged turnaround times.

If less sensitive tests, such as some rapid point-of-care tests, are used, healthcare providers should be aware of the performance of the tests and may want to consider different testing approaches, such as serial testing. "Negative" results should be considered as "presumptive negative" and healthcare providers should consider them in the context of clinical observations, patient history, and epidemiological information. Thus, if there is a significant new outbreak in a congregate care facility, or high clinical suspicion of an infection in an individual resident, a negative point of care test should be confirmed with a highly sensitive molecular test (refer to CDC guidelines). It is not necessary to repeat negative tests if they are obtained during routine screening or surveillance.

Commercial manufacturers and laboratories submitting an EUA request to FDA for tests to screen asymptomatic individuals should consider the validation recommendations outlined in the [EUA templates](#) for such use.

New guidance below. If the Web post of the package needs to happen a few minutes prior to the PR distribution, that’s fine. Keep it all generally around 530 though.

We need to point Marks/Hahn call participants to this posted info so they are able to pop informed stories quickly as the political forces array against us.

Can we give the EUA package to call participants, embargoed until 4:30 posting?

Michael R. Caputo

Assistant Secretary for Public Affairs
US Health and Human Services

Michael-

We could, but we have one item that MUST go before all others- the posting of the EUA package to the FDA website. We could push the package out at 4:30 and the PR/rest at 4:45 to ensure there is no overlap.

Would that work?

We’ve requested that we do an embargoed ‘technical brief’ media roundtable at about 3pm. That would have Dr Marks of CBER cover all of this in whatever detail needed. Likely also have Dr Hahn on this as well. 30 min call to allow folks to get to WH rose garden event.

Second, PR is in final clearance- we will share that very shortly. Adjustments made due to the addition of the event this evening. Plan is to have PR drop as conf. begins. We have been requested to drop the PR early on embargo basis to WH media. Suggested timeline below:

1100: Prep call for Dr Marks / FDA, ASPA, WH Comms

1400: prep call for Dr Hahn / FDA/ASPA team

1500: Media roundtable call for Dr Marks/Dr Hahn

1600: Dr Hahn movement to WH/Testing/Security

1700: Prep time at WH

1800: GO time for Rose Garden event

1800: package posts on FDA site

1815: FDA press release posts

Suggested select media for 3pm tech call:

FDA suggests the following for the 3pm call if we can get WH approval:

Wapo--Laurie McGinley

WSJ--Tom Burton and Amy Marcus (rec both because Amy and Tom working together on CP stories)

NYT—Recommend Sheri Fink

AP—Matt Perrone

Reuters—Caroline Hume

ABC—Eric Strauss, Jen Ashton Producer

NBC—Lauren Dunn, medical unit producer

CBS—Amy Birnbaum, medical unit producer

CNN—Jacqueline Howard (could also ping Sara Murray)

Fox—Marc Siegel’s team

Subject: RE: Duration of antigen detection

The team has been contacted. We'll go through the data we have to see what we can do for Phase I and whether we could modify language in the authorizations based on the currently available science or, if not, update applicable FAQ(s). We'd been asked to update our current FAQ on screening asymptomatics with the version immediately below and were going to post it by Monday morning. I can hold it for now until we resolve your Phase I request.

We'll work on Phase II, as well.

Q. Does the FDA have recommendations for healthcare providers using SARS-CoV-2 diagnostic tests for screening asymptomatic individuals for COVID-19?

A: An asymptomatic individual may be suspected of COVID-19 by their healthcare provider for various reasons, such as known exposure or working in a high-risk environment. Such use is within the authorized indications for use of tests intended for individuals suspected of COVID-19 by their healthcare provider. For healthcare providers who are ordering an authorized SARS-CoV-2 diagnostic test to be used off-label (outside the authorization) to screen asymptomatic individuals not suspected of having COVID-19, we recommend they consider the information below. Although the current available literature suggests that symptomatic individuals with COVID-19 and asymptomatic individuals without known exposure may have similar levels of viral genetic material, there is limited data on the distribution of viral loads in individuals with and without symptoms across demographics, different settings, and specimen types. Therefore, when screening asymptomatic individuals, healthcare providers should consider using a highly sensitive test, especially if rapid turnaround times are available. If highly sensitive tests are not feasible, or if turnaround times are prolonged, health care providers may consider use of less sensitive point of care tests, even if they are not specifically authorized for this indication. For congregate care settings, like nursing homes or similar settings, repeated use of rapid point of care testing may be superior for overall infection control compared to less frequent, highly sensitive tests with prolonged turnaround times.

If less sensitive tests, such as some rapid point-of-care tests, are used, healthcare providers should be aware of the performance of the tests and may want to consider different testing approaches, such as serial testing. "Negative" results should be considered as "presumptive negative" and healthcare providers should consider them in the context of clinical observations, patient history, and epidemiological information. Thus, if there is a significant new outbreak in a congregate care facility, or high clinical suspicion of an infection in an individual resident, a negative point of care test should be confirmed with a highly sensitive molecular test (refer to CDC guidelines). It is not necessary to repeat negative tests if they are obtained during routine screening or surveillance.

Commercial manufacturers and laboratories submitting an EUA request to FDA for tests to screen asymptomatic individuals should consider the validation recommendations outlined in the [EUA templates](#) for such use.

Subject: Abbott's Weekly Covid Data -- Week of 8-9-20
Attachments: Abbott Serology IgG COVID19 Testing Sites --Confidential-- Week of 8-9-20 Report.xlsx; Abbott m2000 & Alinity m COVID19 Testing Sites --Confidential-- Week of 8-9-20.xlsx; Abbott ID NOW COVID19 Testing Sites --Confidential-- Week of 8-9-20.xlsx

Good evening,

Here is the Covid data for the week starting 8-9-20.

Please find attached Abbott's confidential data for the week starting August 9, 2020 for (1) m2000 and Alinity m; (2) ID NOW; and (3) ARCHITECT and Alinity i testing platforms which we are providing pursuant to a Data Use Agreement with HHS.

For m2000 and Alinity m test data, there are two types of data we are reporting:

1. Information in our control such as the names and addresses of our customers and the number of tests we shipped to them cumulatively and this week (Sunday to Saturday shipments).
2. Raw data we receive from a remote data link that is sent from the instruments at the customers to Abbott.
 - a. We only receive the remote data link from certain customers (on the spreadsheet, the customers we don't receive data from are in gray).
 - b. For those customers with the remote data link, we are providing raw data that has the number of tests run and the number of positives. Customers run their own required protocols to validate the accuracy of a test when a new test first becomes available. Those validation processes include negative and positive samples. The raw data we get from data link of the instrument cannot distinguish between validation samples and patient samples.

For ID NOW test data:

1. We are reporting names, addresses, total cumulative tests shipped, and total tests shipped this week (Sunday to Saturday shipments).

2. Because ID NOW is a portable instrument, the sites to which we are shipping tests and instruments might not be the sites at which testing is occurring.

For ARCHITECT and Alinity i serology IgG test data, there are two types of data we are reporting:

1. Information in our control such as the names and addresses of our customers and the number of tests we shipped to them cumulatively and this week (Sunday to Saturday shipments).
2. Raw data we receive from a remote data link that is sent from the instruments at the customers to Abbott. We only receive the remote data link from certain customers (on the spreadsheet, the customers we don't receive data from are in gray).

Deb:
I agree and share your concerns. As I mentioned to you over the phone, we need to sit down with him in a (hopefully) non-confrontative discussion the go over in detail the basis of his claims. He is a very clever guy and knows the literature (in his own way). It is in the interpretation of the literature that we differ. Also, we need to address directly with him at least three major issues articulated by Deb: 1) his believe that there is not much harm to anyone other than the people in the nursing homes who are at high risk for severe disease and death. When I bring up the remainder of the population who are vulnerable, but not in nursing homes (obesity, hypertension, diabetes, etc) he sees to recognize that they are at risk but some how passes over the obvious connection between letting the pandemic play out and the likelihood that we will be killing a lot of people (not just nursing home inhabitants) along the way. 2) His insistence that children in schools in the red zones will not be the source of super spreader events. He says that they get infected at home and in the community if they do not go to school and so why not let them go to school in the red zones. He says there

are data that show that children get infected at home; however, there were no comparative data at the time of those studies with children in school because they were kept out of school. We are only now collecting data that children actually do get readily infected. We need to do the phylogenetic studies to show (or not) just where they get infected. However, we cannot assume right now that school is not a source of super spread. That is a dangerous and irrevocable assumption. 3) He feels that the long term effects of COVID-19 on patients, including non-hospitalized patients are unusual and likely one-offs that are anecdotal. We need to address these issue directly with him.

Hopefully, we can wait a week until I can resume speaking. Thanks,
Best,
Tony

Subject: Task Force 20 August

I am more convinced than ever the dangers of Dr. Atlas' views on this pandemic. His thinking has not evolved with the knowledge that has been gained during this pandemic and the dangers of making broad pronouncement when we don't have any significant data on that issue. We all know the long term consequences of simple viral infections – we have seen the pericarditis, myocarditis, even cardiomyopathy, vasculitis and the long continued open question of relationship to autoimmunity. We all need to be careful about definitive pronouncements or comparisons. I am very uncomfortable with the comparison that in children under 18 its less than flu as we have the least experience of this virus in this age group and we need to always preface with this statement, "we are only now seeing substantial infections in children and we are carefully following the impact".

Dr. Atlas repeated stated that one only needs to protect the nursing homes (1.5M residents) without the understanding the majority of deaths are occurring from community members with underlying conditions (the 81M). He doesn't grasp we have spent the last 6 months working to protect the residence of nursing homes and virus gets into the nursing homes from the community – from widespread community spread and the way to stop deaths in NH and deaths in the community is to stop community spread. We can all debate the effectiveness of different mitigation options as at the beginning they were more based on PH theory and had not been implemented but we now know partial lockdowns work, but we also know that mask mandates, increasing social distancing, closing bars, restricting social gatherings and personal hygiene does work as evidenced across the sunbelt. But all of these can be overcome by what we chose to do in private when no one is watching such as home parties – even innocent get togethers. Fundamentally, Dr Atlas believes that this virus has a "natural" course that is happening independent of any mitigation and what we are witnessing is the "natural" course of the virus not the impact of community mitigation. (b) (5)

[REDACTED]. I don't see the President so I don't have a counter balance opportunity to this Atlas Dogma. Tony and I did not brief the President nor speak to the President between 22 April and the end of July beyond one vaccine briefing in July (b) (5)

[REDACTED]. Providing information not based on data or knowledge of pandemics – nor pandemic responses on the ground but by personal opinion formed by cherry picking data from nonpeer reviewed COVID publications. This is dangerous and a true threat to a comprehensive and critical response to this pandemic. Dr Atlas views appeal to a subsection of American citizens and if allowed to gain traction will reverse months of incredibly hard won gains. Deb

Subject: COVID Messaging Calls

Hi Team,

We are planning to resume these calls after convention. I will reach out later next week with dates/times for the week of the 31st.

Hope you all have a great weekend!

Best,

Katherine Kline
Office of the Chief of Staff
