Availability Update for Multiple Flexible Containers

Dear Customer,

Pfizer Hospital is committed to providing timely supply information so that you can plan for patient care. As such, we want to notify you that we are experiencing limited supply and intermittent stock outs for several of our flexible container presentations, including **Dobutamine in 5% Dextrose Injection, USP**, **Dopamine in 5% Dextrose Injection, USP**, **Heparin in 5% Dextrose Injection, USP**, **Heparin in 0.45% Sodium Chloride Injection, USP**, and **Heparin in 0.9% Sodium Chloride Injection, USP**.

This supply interruption is due to a complex combination of manufacturing challenges both related to COVID-19 as well as specific to flexible container products. These include significant and sustained increases in demand, a delay of a third-party supplied component required to manufacture select presentations, and previous capacity limitations due to COVID-19 surges and colleague safety.

We are actively working to address these challenges and return to healthy inventory levels. While operations have now stabilized and intermittent deliveries are expected, we are currently estimating full recovery in Q4 2022. To help ensure equitable distribution of remaining inventory and reduce the potential for stockouts, we are releasing limited quantities of product to wholesalers and via direct shipment on a weekly basis, depending on the NDC.

Details on impacted products can be found in the table below, current as of the date of this letter. Please recognize that this is a dynamic situation and these estimates may change, so we encourage you to check our [Availability Report](#), updated daily and accessible on the [PfizerHospitalUS.com](#) homepage, for the latest information on product status. We will continue to provide timely updates as necessary.
