

Average Inorganic Arsenic in Infant/Toddler Foods

Product Category	Average ¹ Inorganic Arsenic ² (ppb ³)	Number of Samples
Cereal - Infant/Toddler (rice) ⁴	103	76
Cereal - Infant/Toddler (multigrain) ⁵	30.0	6
Cereal - Infant/Toddler (non-rice) ⁵	13.9	30
Apples ⁷	3.0	10
Cereal - Oat Ring	17.2	30
Grapes	4.5	10
Juice - Apricot ^{8,8}	1.1	29
Juice - Grape ^{8,8}	12.4	61
Juice - Peach ^{8,8}	2.6	29
Juice - Pear ^{8,8}	4.3	30
Juice Boxes and Pouches ^{8,9}	5.5	40
Peanut Butter	3.4	29
Quinoa	7.9	30
Raisins	8.1	23
Stage 2 Toddler Foods ¹⁰	8.1	35
Teething Biscuits	44.4	27
Toddler Puffs ¹¹	53.9	31

Note: Results rounded using Microsoft Excel. For clarity of presentation and for scientific accuracy, the number of significant figures (number of digits) for the results was set at three for values > 10 ppb, two for values below 10 ppb but above one and one significant figure for values < 1 ppb. These values were based on the precision of the instrumental technique and the limits of detection and quantitation.

¹The average inorganic arsenic reported for each product category was calculated using all inorganic arsenic values. For those samples with total and inorganic arsenic results below the detection limit, half of the detection limit for total arsenic was used for the inorganic arsenic value to calculate the average.

²As(III) and As(V) are the most common oxidation states for inorganic arsenic. Most, if not all, of the inorganic arsenic will be present as either As(III) or As(V). Therefore, adding the values together will represent a reliable estimate of the inorganic arsenic present.

³ppb = parts per billion; µg/kg.

⁴All samples contain rice as the only grain.

⁵All samples contain rice and other grains.

⁶Includes cereals with oats, corn, wheat, and multigrains. None contain rice.

⁷None of the apple samples contained any detectable inorganic arsenic (all were <LOD) and see footnote 1 for why 3 ppb was listed as the average.

⁸An assumption was made that 1 mL = 1 g for calculation purposes.

⁹All samples contain apple and/or grape juice as an ingredient.

¹⁰All samples contain rice as the first, second, or third ingredient.

¹¹One sample that was collected in error was not included in the calculation of the average inorganic arsenic. See the Summary Results and Full Results tables for more information.

^aThese categories include samples that were analyzed in 2012. One mixed juice was collected containing both white grape and peach juice. This product was included in the calculations for grape juice.

Summary Table - Inorganic Arsenic in Infant/Toddler Foods

Product Category	Average ¹ Inorganic Arsenic ² (ppb ³)	Range of Inorganic Arsenic ² (ppb ³)	Number of Samples
Cereal - Infant/Toddler (rice) ⁴	103	20.8 - 176	76
Cereal - Infant/Toddler (multigrain) ⁵	30.0	22.2 - 49.6	6
Cereal - Infant/Toddler (non-rice) ⁶	13.9	3.5 - 68.3	30
Apples ⁷	3.0	3.0	10
Cereal - Oat Ring	17.2	4.4 - 59.6	30
Grapes	4.5	3.0 - 15.2	10
Juice - Apricot ^{a,8}	1.1	0.05 - 3.0	29
Juice - Grape ^{a,8}	12.4	0.6 - 49.6	61
Juice - Peach ^{a,8}	2.6	0.3 - 15.2	29
Juice - Pear ^{a,8}	4.3	1.0 - 9.7	30
Juice Boxes and Pouches ^{8,9}	5.5	0.9 - 32.1	40
Peanut Butter	3.4	3.0 - 5.9	29
Quinoa	7.9	0.3 - 49.0	30
Raisins	8.1	3.0 - 22.6	23
Stage 2 Toddler Foods ¹⁰	8.1	0.3 - 21.3	35
Teething Biscuits	44.4	17.0 - 71.5	27
Toddler Puffs ¹¹	53.9	16.4 - 145	31

Note: Results rounded using Microsoft Excel. For clarity of presentation and for scientific accuracy, the number of significant figures (number of digits) for the results was set at three for values > 10 ppb, two for values below 10 ppb but above one and one significant figure for values < 1 ppb. These values were based on the precision of the instrumental technique and the limits of detection and quantitation.

¹As(III) and As(V) are the most common oxidation states for inorganic arsenic. Most, if not all, of the inorganic arsenic will be present as either As(III) or As(V). Therefore, adding the values together will represent a reliable estimate of the inorganic arsenic present.

²ppb = parts per billion; µg/kg.

³LOD = Limit of Detection (see LOD and LOQ table).

⁴All samples contain rice and other grains.

⁵TR = Trace. Result between the limit of detection and limit of quantitation (see LOD and LOQ table).

⁶Includes cereals with oats, corn, wheat, and multigrains. None contain rice.

⁷All samples contain rice as the only grain.

⁸An assumption was made that 1 mL = 1 g for calculation purposes.

⁹NS = Not Speciated.

¹⁰All samples contain apple and/or grape juice as an ingredient.

¹¹All samples contain rice as the first, second, or third ingredient.

¹²This sample was collected in error and not included in calculation of the average inorganic arsenic.

^aThese categories include samples that were analyzed in 2012. One mixed juice was collected containing both white grape and peach juice. This product was included in the calculations for grape juice.

Note: Results rounded using Microsoft Excel. For clarity of presentation and for scientific accuracy, the number of significant figures (number of digits) for the results was set at three for values > 10 ppb, two for values below 10 ppb but above one and one significant figure for values < 1 ppb. These values were based on the precision of the instrumental technique and the limits of detection and quantitation.

¹ppb = parts per billion (microgram/kilogram)

²As(III) and As(V) are the most common oxidation states for inorganic arsenic. Most, if not all, of the inorganic arsenic will be present as either As(III) or As(V). Therefore, adding the values together will represent a reliable estimate of the inorganic arsenic present.

³Serving is based on the product serving size. The average inorganic arsenic (micrograms/serving) reported for each product category was calculated using all inorganic arsenic values. For those samples with total and inorganic arsenic results below the detection limit, half of the detection limit for total arsenic was used for the inorganic arsenic value to calculate the average.

⁴Serving size is based on raw fruit serving sizes <http://www.fda.gov/downloads/Food/GuidanceRegulation/UCM153464.pdf>

⁵TR = Trace. Result between the limit of detection and limit of quantitation (see LOD and LOQ table).

⁶LOD = Limit of Detection (see LOD and LOQ table).

⁷All samples contain rice and other grains.

⁸Includes cereals with oats, corn, wheat, and multigrains. None contain rice.

⁹All samples contain rice as the only grain.

¹⁰An assumption was made that 1 mL = 1 g for calculation purposes

¹¹NS = Not Speciated.

¹²All samples contain apple and/or grape juice as an ingredient.

¹³The serving size represents the prepared, as consumed quinoa product.

¹⁴All samples contain rice as the first, second, or third ingredient.

¹⁵This sample was collected in error and not included in calculation of the average inorganic arsenic.

⁹Indicates a juice sample that was analyzed in 2012. One mixed juice was collected containing both white grape and peach juice. This product was included in the calculations for grape juice.

Limit of Detection (LOD) and Limit of Quantitation (LOQ) - in ppb

Note - actual limits may vary depending on the analytical portion used in the analysis.

For inorganic arsenic, the limits are the range for the sum of As(III) and As(V).
