^[a] 360 samples (sample numbers 1-344 and 2J-45J) were used in the development of the *Action Levels for Lead in Food Intended for Babies and Young Children: Draft Guidance for Industry*.

^[b] Lead analyses were conducted using inductively coupled plasma mass spectrometry (ICP-MS) (<https://www.fda.gov/media/87509/download>). Limits of Quantitation (LOQs) ranged from 3.1 to 10.9 ppb; limits of Detection (LODs) ranged from 0.3 to 1.2 ppb. Results below the LOD are reported as <LOD. Trace values (those greater than the LOD and less than the LOQ) are reported in italics.

This table includes samples that were tested in 2020-2021. For the full article of samples tested in 2021, please see: Patrick J. Gray (2022) A survey of toxic elements in ready to eat baby foods in the US market 2021, Food Additives & Contaminants: Part B, DOI: 10.1080/19393210.2022.2146209
