This document has been posted in compliance with the FOIA Improvement Act of 2016, which requires agencies to make certain records that have been requested three or more times publicly available. It provides a snapshot of CTP's internal thinking on certain aspects of tobacco regulatory science. The information it contains is subject to change, such as based on changes in policy, the regulatory framework, or regulatory science. It is not binding on FDA or the public. It may have been withdrawn or superseded after it was issued or may otherwise be outdated. FDA's review of tobacco product applications is based on the specific facts presented in each application, and is documented in reviews particular to each application.

Given the above, you should not use this document as a tool, guide, or manual for the preparation of applications or submissions to FDA. Instead, all interested persons should refer to the Federal Food, Drug, and Cosmetic Act, and its implementing regulations, as well as guidance documents prepared by FDA, for information on FDA's tobacco authorities and regulatory framework. FDA <u>also regularly posts</u> <u>additional resources</u> for applicants, such as webinars and application tips, on <u>CTP's website</u> and <u>social media</u>.

Subject:	Addendum to Approach to PMTAs ¹ for Non-Tobacco Flavored ENDS ² not in Substantive Scientific Review (Phase III)	

Background

As of September 9, 2020, FDA commenced review of premarket applications for electronic nicotine delivery systems (ENDS) products on the market as of August 8, 2016; applicants were required by a court order to submit applications to FDA by this date. On July 9, 2021 (and July 28, 2021 addendum), OS established a plan to effectively manage flavored³ ENDS PMTAs not in Phase III, substantive scientific review, by applying a standard for evidence necessary to demonstrate a potential benefit to adult smokers of flavored ENDS. This addendum addresses the approach used to identify ENDS to undergo this review.

Discussion

FDA review of flavored ENDS as described in PMTA Review: Evidence to Demonstrate Benefit of Flavored ENDS to Adult Smokers memo (signed August 17, 2021) excludes tobacco and menthol. For Appendix A, tobacco-flavored ENDS, and Appendix B, menthol-flavored ENDS, we evaluated the list of all characterizing flavors provided by ENDS e-liquid manufacturers⁴ and identified those characterizing flavors that we considered to be solely tobacco or menthol. Flavor combinations were omitted. For example, in Appendix A, Kentucky Tobacco flavor was interpreted as tobacco only, considering this is a blend type not a flavor. Any characterizing flavors other than tobacco (e.g., Tropical Tobacco) was not included in this appendix. For Appendix B, we used a similar approach, we looked at all the

¹ Premarket Tobacco Product Applications

² Refers to open e-liquids, closed e-liquids, and closed e-cigarettes containing non-tobacco flavored e-liquid

³ Throughout this memo, and solely as a matter of shorthand to aid in the drafting of this document, the term *flavored ENDS* refers to any ENDS other than tobacco-flavored and menthol-flavored ENDS.

⁴ An archive query was used to identify all the flavors captured in the characterizing flavor field.

flavors listed in the characterizing flavors field and identified any flavor we considered to be menthol only, meaning that if a product listed a characterizing flavor such as "tropical menthol", this product was not included in Appendix B. Because of spelling variability and the use of different languages, we expanded the list to also include products for which tobacco or menthol was misspelled or used other descriptors such as smooth to describe the flavor. Other menthol variants such as wintergreen and frost were not included in Appendix B. Given the limitations of the archive data quality and sole use of a single field to determine the characterizing flavor, both Appendix A and B may not be an exhaustive list. The remaining flavored ENDS in PMTA bundles received by September 9, 2020, that have not started substantive scientific review, are subject to a streamlined review for evidence to demonstrate benefit to adult smokers.
